

Find out what year our aerial imagery base maps were flown

Aerial imagery is not all flown in one go – the aerial basemap you see on Canterbury Maps is a collection of surveys captured via airborne cameras and sensors.

To figure out what year the aerial imagery was flown in an area of interest follow the below steps:

1. Open the map viewer
2. Using the add data tool search for 'latest imagery' or anything along those lines
3. Click **add** next to the layer **Latest Imagery Extents**
4. Locate your area of interest and click on the map
5. A pop up should appear that details the date the imagery was flown in that particular area
